VASS checks 51606 (OP) amended
'Inconsistent Date of Birth / Date of Patient Referral'

The logic for this check is that if the patient's date of birth is later than the date of patient referral, the record is flagged as inconsistent.

Previously, all records (new, follow-up and pre-operative assessment attendances) were checked. However, as referrals only relate to new appointments, this check has been changed so that only records relating to new appointments are checked.

Follow-up and pre-operative assessment attendances are no longer included in this check.
